SUMMARY

- Full Stack Developer with 5 years of experience building scalable, high-performance web applications across finance, telecom, and enterprise domains.
- Proficient in Java, Python, TypeScript, and JavaScript with expertise in frameworks like React, Angular, Node.js, Spring Boot, Flask, and Django.
- Designed and deployed cloud-native microservices on AWS, Azure, and GCP using Docker, Kubernetes, Terraform, and Helm.
- Built secure, efficient RESTful and GraphQL APIs, implemented JWT, OAuth2, and RBAC for enterprise-grade security.
- Integrated PostgreSQL, MongoDB, MySQL, and Redis for high-volume data storage and caching with ORM tools like Hibernate and JPA.
- Automated CI/CD pipelines using GitHub Actions, Jenkins, and GitLab CI, improving release speed and reliability.
- Enhanced system observability with Prometheus, Grafana, and centralized logging for real-time performance monitoring.
- Collaborated in Agile teams to deliver optimized, test-driven software solutions with high code coverage and low defect rates.

SKILLS

- **Programming Languages:** Java, Python, TypeScript, SQL, JavaScript
- **Frontend Development:** HTML5, CSS3, React, Angular
- **Backend Development:** Spring Boot, Spring Cloud, Node.js, Express.js, Django, Flask
- **Database Management:** MySQL, PostgreSQL, MongoDB, SQL Server, Redis, Hibernate, JPA
- **Messaging & Event Streaming:** Kafka, RabbitMQ
- **Version Control & CI/CD:** Git, GitLab CI, Jenkins, GitHub Actions, Bitbucket
- **Containerization & Orchestration:** Docker, Kubernetes, Docker Compose, Helm
- **Authentication & Security:** JWT, OAuth2, OpenID Connect, SSL/TLS, Role-Based Access Control
- **Cloud Platforms:** AWS, Microsoft Azure, Google Cloud Platform
- **API Management:** RESTful APIs, GraphQL, SOAP APIs, AWS API Gateway
- **Testing & Automation:** JUnit, Mocha, Chai, Jest, Cypress, Selenium
- **DevOps Tools:** Ansible, Terraform, Maven, Gradle, Prometheus, Grafana
- **Agile Methodologies:** Scrum, Kanban, Jira, Confluence, TDD, BDD
- **Miscellaneous Tools:** SonarQube, Postman, Swagger, Visual Studio Code, IntelliJ IDEA, Draw.io, Slack

WORK EXPERIENCE

JPMC

July 2025 – Present

Full Stack Developer

- Spearheaded the development of a cloud-native Trade Surveillance System by designing distributed microservices in Node.js and Flask, enabling real-time detection of suspicious trading activity across high-volume data streams.
- Built modular, high-performance frontend components in React and TypeScript, delivering interactive dashboards for risk analysts and reducing alert triage time by 35%.
- Deployed secure, auto-scaling workloads to AWS using Kubernetes, Helm, and Terraform, streamlining operations and enhancing platform scalability.
- Integrated Prometheus and Grafana for observability, implemented JWT-based authentication, and enforced RBAC policies to align with enterprise security standards.

Full Stack Developer – Intern

September 2024 – June 2025

- Contributed to the Athena Cloud Platform Migration project, supporting the transformation of JPMC's risk and pricing system into a scalable, cloud-native architecture using AWS and Kubernetes.
- Built and maintained RESTful and GraphQL APIs using Node.js and Flask, improving API response efficiency by 35% and enabling secure microservice communication.
- Developed modular UI components in React and TypeScript for real-time pricing dashboards, increasing frontend load speed by 40% through performance optimization.
- Automated infrastructure provisioning and deployment using Terraform, GitHub Actions, and Helm, increasing release reliability and reducing manual overhead.

- Integrated Prometheus and Grafana for real-time monitoring and alerting, enabling enhanced observability across containerized services.

Cognizant Technology Solutions

August 2021 – January 2024

Software Engineer

- Developed and maintained reusable and scalable front-end components for the Verizon POS application used in retail stores and by customer support agents on iPad and desktop devices, ensuring seamless cross-platform functionality.
- Wrote comprehensive unit and integration tests for each component, achieving over 90% test coverage using Jest, Enzyme and React Testing Library, significantly reducing regression issues and improving code reliability.
- Optimized application performance by implementing code-splitting and lazy loading with Webpack, reducing initial page load times by 40% and improving user experience.
- Refactored legacy codebase by modularizing components and adhering to best practices in JavaScript, reducing maintenance overhead and improving developer efficiency.
- Participated in debugging production issues and performing root cause analysis for frontend/backend integration bugs.
- Collaborated in an Agile environment as part of a core team of 2 UI developers and 2 backend developers, working closely with cross-functional teams such as product managers, QA engineers, and DevOps to deliver high-quality, scalable solutions.

Dell Technologies

January 2020 – July 2021

Full Stack Developer

- Architected the Product Lifecycle Management Tool from the ground up, enabling streamlined tracking of hardware from initial design to final delivery, adopted across multiple enterprise departments.
- Engineered robust and scalable RESTful APIs using Spring Boot and Express.js to support complex product workflows, engineering approval processes, and real-time vendor data integration.
- Implemented highly responsive Angular dashboards that provided intuitive, real-time visualization of product lifecycle stages, improving operational visibility and decision-making by 40%.
- Refactored legacy monolithic systems into modular, container-ready microservices, significantly enhancing scalability, deployment speed, and long-term maintainability.
- Optimized data access and performance by integrating MySQL and SQL Server with Hibernate and JPA, enabling dynamic query handling across distributed systems.
- Secured sensitive application endpoints using JWT-based authentication and SSL/TLS encryption, achieving a 30% reduction in unauthorized access incidents.
- Automated end-to-end CI/CD pipelines using Jenkins, Bitbucket, and Docker Compose, reducing manual intervention and cutting deployment times by 50%.

PROJECTS

Real-Time Carbon Footprint Tracker

- Built a data-driven dashboard with Vue.js and Django REST Framework, allowing users to visualize carbon emissions from travel, energy, and consumption sources.
- Utilized PostgreSQL and Redis for structured data storage and caching, and implemented live updates via WebSocket to enhance real-time user feedback.

Personal Finance Management System

- Designed and developed a secure budgeting platform using React, Node.js, and MongoDB, enabling users to manage expenses, set financial goals, and generate monthly spending reports.
- Integrated Plaid API for real-time bank data and deployed the app using AWS Lambda and API Gateway for serverless architecture.

EDUCATION

- **Master in Computer Science and Engineering** **January 2024 – June 2025**
University at Buffalo | **GPA: 3.8**
- **Bachelors in Information Science and Engineering** **August 2017 – August 2021**
JSS Academy of Technical Education | **GPA: 8.5**

CERTIFICATIONS

- **AWS Certified Developer – Associate**
