EDUCATION

- State University of New York at Buffalo, Buffalo, USA Expected Graduation May 2025
Master of Science in Computer Science and Engineering (GPA: 3.889)
- Visvesvaraya Technological University, Bengaluru, India
Bachelor of Engineering in Information Science and Engineering (GPA: 8.5)

TECHNICAL SKILLS

Programming Languages: Python, Java

Relevant Coursework: Operating Systems, Algorithms, Data Intensive Computing, Machine Learning, Deep Learning, Relational Database

Machine Learning: Tensorflow, Pytorch, Mlflow, Dagshub, DVC, Apache Airflow

Database Technologies: SQL, MongoDB, PostgreSQL

Other Skills: Data Structures, GIT, OOPS, AWS, Microsoft Azure, Docker

Microsoft Certification: Azure Fundamentals AZ-900

Web Technologies: ReactJS, Redux, NodeJS, ExpressJS, Sequelize ORM

RELEVANT EXPERIENCE

Programmer / Business Analyst at *Cognizant Technology Solutions, Bengaluru, India* Aug 2021 – Jan 2024

- Developed and maintained components for the POS system using React and Redux for state management.
- Improved code quality by implementing unit tests with React Testing Library, achieving over 90% test coverage using Jest and Enzyme.
- Optimized application performance by incorporating lazy loading with Webpack, reducing page load time significantly.
- Collaborated with cross-functional teams to gather requirements and implement business solutions, enhancing the functionality and performance of the POS system.

Full Stack Engineer Intern at *Cognizant Technology Solutions, Bengaluru, India* Feb 2021 – Aug 2021

- Developed 'Project Auditing System' using open-source development tools as part of a team of four with individual role of working on backend services in Java Spring Boot and deployment of the project using AWS.

COMPUTER SCIENCE PROJECTS

Kratos Digital Store - E-commerce Platform for PC Games Jan 2025

- Tech Stack:** React, Redux Toolkit, Sequelize ORM (PostgreSQL), AWS, Vercel, Tensorflow, Airflow
- Designed and developed an e-commerce website tailored for the sale of PC games.
- Developed an automated **sales forecasting system** using LSTM models
- Deployed the platform on AWS with the frontend hosted on Vercel for fast, scalable performance.

Amazon Reviews Sentiment Analysis July 2024

- Implemented LSTM and advanced versions of LSTM to classify Amazon reviews into good/bad categories.
- Achieved 91.6% accuracy in sentiment classification through model optimization and data preprocessing.

Norway Fisheries Species and Tools Recommendation System May 2024

- Performed data cleaning and preprocessing on raw data from Norwegian fisheries.
- Trained machine learning models to predict the most likely species to be caught and recommended tools for the task.

Formula-1 Database Management System May 2024

- Designed a BCNF normalized database to manage and update data for Formula 1 events.
- Developed stored procedures to automatically refresh team standings and driver standings table whenever race data is updated.

Automated Parking System using Convolutional Neural Networks Apr 2023

- Implemented an automated parking system using low-light enhancement algorithms for license plate recognition.
- Trained neural networks with TensorFlow and used Python libraries (OpenCV, NumPy, scikit-learn) for real-time detection via webcam input.
