EDUCATION

University At Buffalo SUNY, Buffalo, New York

Expected Graduation: May 2025

Masters in Computer Science and Engineering

Coursework: Advanced Data Structures and Algorithm, Data Modeling Querying Languages, Machine Learning, Deep Learning, Reinforcement Learning, Pattern Recognition, Data Intensive Computing, Computer Vision

JSS Academy of Technical Education, Bangalore, Karnataka

Aug 2017 – June 2021

Bachelor's of Engineering in Information Science

Coursework: Web Development and Application, Computer Programming, Object Oriented Programing, Computer Networks, Database Management, Operation Systems

SKILLS

Languages: JavaScript, TypeScript, Java, Python, C, C++, HTML, CSS

Technologies: React.js, Redux, Node.js, Express.js, Tensorflow, PyTorch

Databases and Query Languages: SQL (PostgreSQL, MySQL), NoSQL (MongoDB, Firebase)

Cloud Services: AWS, Docker, Hadoop

Others: Agile, Documentation, Verbal and Written Communication Skills, Microsoft Office, Problem Solving, Cloud Computing, Continuous Learning, Code Simplicity

EXPERIENCE

Software Engineer | Cognizant Technology Solutions(CTS), Bangalore, India

Aug 2021 – Jan 2024

- As a contractor for Verizon, developed and maintained reusable and scalable front-end components for the **Verizon POS application** used in **retail stores and by customer support agents on iPad and desktop devices**, ensuring seamless cross-platform functionality.
- Wrote comprehensive unit and integration tests for each component, achieving over **90% test coverage** using **Jest, Enzyme, and React Testing Library** significantly reducing regression issues and improving code reliability.
- Optimized application performance by implementing **code-splitting and lazy loading with Webpack**, reducing initial page load times by 40% and improving user experience.
- Refactored legacy codebase by modularizing components and adhering to best practices in **JavaScript**, reducing maintenance overhead and improving developer efficiency.
- Collaborated in an **Agile environment** as part of a core team of **2 UI developers** and **2 backend developers**, working closely with cross-functional teams such as product managers, QA engineers, and DevOps to deliver high-quality, scalable solutions.

PROJECTS

Kratos Digital Store - E-commerce Platform for PC Games

[GitHub](#) [Link](#)

- Developed a full-stack e-commerce web application for PC games using Node.js and Express.js for the backend, and React.js with Redux Toolkit for the frontend, incorporating Firebase Authentication with JWT tokens for secure user login and session management.
- Automated deployment pipeline using GitHub Actions for CI/CD and provisioned cloud infrastructure with Terraform on Google Cloud Platform (GCP) for scalable and reliable deployment.
- Built a sales forecasting ETL pipeline with Apache Airflow, TensorFlow and MLflow, enabling predictive analytics.

Autoencoders for Anomaly Detection in Manufacturing

[Link](#)

- Developed a deep autoencoder-based anomaly detection system for identifying sensor-level defects in electronic components within a manufacturing environment.
- Achieved 99% detection accuracy by leveraging reconstruction error to identify subtle deviations in input patterns.
- Conducted performance benchmarking across LSTM, BiLSTM and Stacked LSTM encoder variants, comparing precision, recall and inference latency to select the most effective model.
- Integrated Neptune.ai for real-time experiment tracking, hyperparameter logging and performance visualization.

Formula-1 Database Management System

- Designed a BCNF normalized database to manage and update data for Formula 1 events.
- Developed stored procedures to automatically refresh team standings and driver standings table whenever race data is updated.
- Developed a user interface for interacting with the Formula-1 data base using Django.

PUBLICATION

- 'Automatic Parking System using Vehicle License Plate Detection', CiIT International Journal of Digital Image Processing, Jul'21, vol 13, version 2, pages 33-40. [Paper](#)
